Individual Quiz — Module 8: Functions

Name: _____

The following Python function returns a number.

```python
def function(x, y):
    factor1 = (x+y)
    factor2 = (x-y)
    return factor1*factor2
```

Determine what the following invocations would print:

1. `print(function(0,1))`

2. `print(function(1,1))`

3. `print(function(2,1))`

4. `print(function(2,2))`

5. `print(function(2,3))`
