The University Class

Write a university class with components Name, City, State. Create str and repr dunders.

Use the following as a test case:

```
if __name__=="__main__":
    u1 = University("Marquette University", "Milwaukee", "WI")
    u2 = University("Santa Clara University", "Santa Clara", "CA")
    print(repr(u1))
    print(repr(u2))
    print(u1)
    print(u2)
```

Output should be:

```
University: Name=Marquette University, City=Milwaukee, State=WI
University: Name=Santa Clara University, City=Santa Clara, State=CA
Marquette University, Milwaukee, WI
Santa Clara University, Santa Clara, CA
```
