

Individual Quiz: Module 11-Lists

Name: _____

Describe what the function on the right does:

- It returns a list with the even numbers in lista.
- It returns a list with the odd numbers in lista.
- It returns a list with all the elements in lista.
- It returns a list with the remainder of all elements when dividing by two.

```
def even(lista):  
    result = []  
    for ele in lista:  
        if ele%2!=0:  
            result.append(ele)  
    return result
```
