

Selftest Dictionaries

1. Create a dictionary that associates to the english words for numbers 'one', 'two', 'three', 'four' the corresponding integers using the "curly bracket method"
2. Add to the dictionary the association between the other numbers smaller than ten, e.g. 'five' has value 5, etc, using assignment
3. Print out the resulting dictionary.
4. Programmatically calculate the sum of all digits whose english word starts with 's' or with 't'.
