

## Individual Quiz – Functions

Role Number: \_\_\_\_\_

The following Python function returns a number.

```
def function(x, y):  
    factor1 = (x+y)  
    factor2 = (x-y)  
    return factor1*factor2
```

Determine what the following invocations would print:

1. `print(function(0,1))`
2. `print(function(1,1))`
3. `print(function(2,1))`
4. `print(function(2,2))`
5. `print(function(2,3))`
